**Tools:** Firebase, Git, GitHub, Tailwind, Redux, Netlify, Node, PyAutoGui

---

### Projects

#### [ClaremontWebDesigns.com](#)

Web Agency designed for small local businesses

- Optimized for performance with the help of Google's pagespeed.web.dev tool
- Focused on accessibility, SEO, mobile responsiveness, and user experience
- Developed [Learning Time Adventures](#) for a paying client
- Researched competitors and utilized ChatGPT to brainstorm written content
- Managed full project lifecycles, from client consultation and requirement gathering, to design, development, and deployment

#### [Final Fantasy XI Forum](#)

Discussion forum hosted on Netlify using React, Typescript, Tailwind, and Redux

- Coded React function components to make scalable, maintainable web application
  - Integrated React Router Dom to allow for dynamic content changes based on URL path
  - Established user authentication with Firebase to allow users to create accounts
  - Launched NoSQL database to create, read, update, and delete forum posts
  - Configured Redux Toolkit to handle global states that need to be passed to components
  - Styled components using Tailwind CSS to improve scalability with multiple developers
- 

### Experience

#### **Certified Nursing Assistant:** *Claremont Manor Care Center*

September 2021 - Current

- Enabled patients to live their best life by assisting with activities of daily living
- Resolved call lights promptly to ensure patient satisfaction
- Assessed vital signs to ensure safety, comfort, and protection of patients by inputting data into computer system

#### **React Web Developer:** *Techrise Internship*

January 2023 - March 2023

- Designed solutions for displaying data intuitively for users
- Inherited an existing codebase and modified it to be more readable and maintainable
- Used Jira software to track progress on coding tasks
- Overhauled documentation for the website and improved the onboarding process

#### **Fullstack Web Developer Trainee:** *Coding Temple*

June 2022 - October 2022

- Developed Flask based web apps to deliver filtered API information to users
  - Architected applications with CRUD functionality to create, read, update, and delete user information
  - Crafted user authentication systems making use of forms, redirects, and restricted routes
  - Leveraged Postgres databases to hold information that would be used for REST API routes
- 

### Education

**San Antonio College, Walnut, Computer Programming (AS Degree) June 2025**
